Dr. Med. Dent. , MAS Esthetic & Micro-invasive Dentistry

Senior assistant & coordinator MAS Esthetic & Micro-invasive Dentistry University of Geneva

Clinique universitaire de médecine dentaire Division of Cariology & Endodontics / Prof. I.Krejci

The evolution of adhesive and minimally invasive dentistry allows to use a wide range of clinical solutions to meet the aesthetic demands of each patient. Often, however, the expectations to be met are so high that they require an in-depth study of the case with the aim of offering a restorative treatment which integrates harmoniously the aesthetics of the smile. In this optic, various digital tools have been developed and perfectionated to provide two-dimensional and three-dimensional treatment previsualization images. This report will illustrate multiple aesthetic clinical cases solved with adhesive and minimally invasive techniques where fully digital workflows and case planning have been integrated.
